In the globalized era, the textile industry is facing the twin challenges of protecting their competitive advantages and responding to the ever growing demands of sustainable development of environmental, social and economic fronts in the form of corporate social responsibility. Carbon responsibility is an extension of the demand on textile industry for demonstrating themselves as a responsible industry.

Analysts have shown that carbon responsibility can also serve as a means for reducing costs across the value chain of textile production provided it is managed well. Hence, Indian textile industry with its outlook to enhance global market share should understand their carbon footprints across the value chain of production and demonstrate its medium to long term intent of becoming carbon responsible as a strategic move to deepen and enhance their global competitiveness. If it is not addressed appropriately demands for carbon responsibility could also be a threat due to voluntary restrictions in the name of carbon responsibility being put forth by global retail chains. This could enhance the production costs of Indian apparel industry and reduce their price competitiveness. In this context, Rajiv Gandhi Renewable Energy Park (RGREP), Gurgaon in collaboration with Greenstratos Consulting (P) Ltd. are organizing a One-day training programme on "Designing Management Systems for Energy Efficient and Carbon Responsible Apparel Industry".

Core Objectives:

- Create awareness on the need and urgency of using energy efficient methods in Textile Industry.
- Provide a comprehensive understanding on reducing carbon emissions and GHG emissions.
- Suggesting efficient methods that uses less energy, emits less carbon and are also cost effective.

Session Details:

The following experts would share concepts and experiences during the programme (tentative list)

- **Thilotham R Kolanu**, with 16 years of professional experiencing in training, research and consultancy in domain of energy, environment and climate change.
- **Pawan Kumar**, 30 years of experience in energy conservation & efficiency with special reference to textiles and apparel industry including international experience.
- **D.S.R Murty**, certified energy auditor with 12 years of work experience in the domain of energy and climate change.

Programme Participation:

The programme is primarily aimed at persons related to textile industry.

Date, Venue and Facilities:

The programme is scheduled on February 11th, 2010 (non-residential) and will be held at Epicentre, Apparel House, Sector 42, Gurgaon.

Certification of Participation:

RGREP initiative of Haryana Renewable Energy Development Agency, will issue a Certificate of Participation upon conclusion of programme.

Registration and Course Fee:

The Programme Fee is Rs. 4500/- (including service tax) per participation. Prior registration is essential.

For registration contact Bhavesh Swami, email: bhavesh@energycentre.in or call 9958136688.
